**Aquafactors  
Janitorial  
Supplies**

- ★ Cleans all vinyl quickly & easily
- ★ Helps reduce colour loss & fading
- ★ Meets manufacturers warranty specifications
- ★ Maintains Vinyl suppleness & increases effective life span

Aquafactors Janitorial Supplies are the UK distributors for WINSOL Laboratory maintenance chemicals. WINSOL, based in Seattle, USA, have a successful thirty year track record in the development of high quality chemical compounds. They produce a range of cleaners for glass, awnings and fascias. Their technical Expertise, related to the transportation and aerospace industries, has made some of their product lines industry leaders. All formulations are produced with food and cosmetic grade chemicals and follow strict environmental guidelines.

With the increasing use of vinyl to produce banners, signs and to manufacture marquees and awnings, there is a need to use a safe, biodegradable system to maintain and protect these surfaces. The **Vinyl Awning Cleaner and Protectant** is a specially formulated blend of proactive cleaning agents giving the professional a one-step cleaning and protective system for light and moderately soiled vinyl fabrics.

The product has a balanced system of surface active agents for cleaning, plasticizers to keep vinyl looking new and supple, and UV inhibitors to deter the damaging effects of weather, particularly sun. It has been proven to save time and money when used as part of a regular maintenance schedule.

The product is designed to work diluted with a water fed pole cleaning system utilising a chemical injector and a brush of medium stiffness. All vinyl surfaces should be cleaned from the bottom upwards and rinsed off immediately to prevent streaking.

For very dirty and neglected surfaces, firstly use **Deep Clean** and then continue regular cleaning with **Awning Cleaner and Protectant**.

Available in 3.78 litres (1 US gallon) containers.
